## Supports

A complete range of solutions allows the user to install the cabinets in the most convenient way. The multiple solutions allow full flexibility in designing the application.

Skirtings are completely modular: they are based on 4 angular elements, and 4 detachable panels, so as to allow complete choice of cable entry. On request, they can be delivered with panels for bottom closing

that can be used also as cable supports. They are available in 100 and 200 mm height. Protection degree is IP20 with bottom pannel in place

A full range of feet can be mounted on the skirtings, with different heights and 40 mm regulation (125/165 – 165/205). The thread is covered by a stainless steel pipe, to avoid nesting of dirt.

If mobility is needed, a range of casters is available, in stainless steel, with or without brake, and with capacity starting from 50 kg each.
